### LAUREL BRIDGE SOFTWARE ANNOUNCES NEW RELEASE OF COMPASS

#### Functionality Enhancements to DICOM Store & Forward Routing Solution

Newark, DE (May 5, 2011) – Laurel Bridge Software released version 2.1.14 of Compass™, its sophisticated, rules-based DICOM Store and Forward Routing application for DICOM store jobs.

Based upon recommendations from existing Compass customers, Compass was enhanced to include:

- Three customizable columns have been added to Compass' main jobs table. Users can give each column a unique name and specify which DICOM tag it should index. These new fields can also be used to filter the Jobs view.
- The Source Calling AE Title, Source Called AE Title, and Source IP address are now displayed in the main Compass jobs table. These fields can also be used to filter the Jobs view.
- Job priority, a recent enhancement that is configurable via rules processing or via manual re-sending, is correctly cloned when copying a job in the Compass Hold Queue.

#### About Laurel Bridge Software

Laurel Bridge Software, Inc. is a Delaware-based corporation, specializing in development and deployment of DICOM™ applications and tools for the medical imaging industry, especially in areas related to network communication for medical devices, appliances and enterprise medical imaging systems via high-speed local and distributed networks. Engineers from Laurel Bridge Software and its sister company, Blair Computing Systems, Inc., have been developing medical imaging systems for more than twenty years. Laurel Bridge Software has a wealth of experience developing PACS networks, modalities, workstations/viewers, archives and protocol or image converter boxes in a variety of configurations.
